

Our New Twin-head laser cutting machine

Our New Twin-head laser cutting machine

We launch the first twin-head laser for the airbag and hazmat suit in Japan.

The separate twin-head drive has high accurate and high acceleration drive system by the linear motor so this can cut faster than traditional timing belt drive and rack and pinion drive single head lasers.

Laser cutting process prevents to generate dust and dirt.

We have started to sale, so please feel free to contact us if you have further inquiries.
